# **ARK Blockchain implemented in Python**

**Tomaž Šifrer**

**Aug 18, 2020**

GENERAL

1	How to run it	3
1.1	Installing the blockchain . . . . .	3
1.2	Blockchain . . . . .	3
1.3	Indices and tables . . . . .	3

*UNFINISHED and NOT MAINTAINED*

## HOW TO RUN IT

Only for people that like to test new stuff and are happy to report bugs or even fix them.

This will run relay node against the devnet.

Node is currently set up to run with docker.

- Clone this repo
- `make build`
- `make start`

For logs blockchain logs, you can run: `make blockchain-logs`

For chain-p2p (p2p service) logs: `make p2p-logs`

For chain-huey (huey service for running async tasks) logs: `make huey-logs`

Current implementation does NOT broadcast blocks/transactions as it's not yet implemented. That will be done after a bit of testing and proper implementation and fixes to some of the other features.

### 1.1 Installing the blockchain

WIP

### 1.2 Blockchain

### 1.3 Indices and tables

- `genindex`
- `modindex`
- `search`
